ANDRÉ MIYAZAWA

SOFTWARE ENGINEER

SKILLS:

Programming Languages:

Python, Java, Go, JavaScript, NodeJS, SQL, R

Databases:

SQL, PostgreSQL, SOQL

Cloud & DevOps:

AWS (EC2, Lambda, S3), Docker, Kubernetes, CI/CD, Terraform

Tools & Software:

Git, Datadog, Grafana, PowerBI, Word, Excel

My personal website:

<https://andrem08.github.io/AndreMiyazawa/>

ABOUT ME:

My name is André Miyazawa, 24 years old, a Junior Software Engineer at Rede, with a primary focus on full-stack Salesforce solutions and cloud microservices development (AWS). I hold a Bachelor's degree in Information Systems from the University of São Paulo (USP), an education that provided me with a robust foundation in algorithms, statistics, and software architecture. I began my career in Credit Risk modeling at Itaú and in the development of machine learning applications at Inmetro. This experience fueled my transition to software engineering at Rede, where I started working with Salesforce (Apex, LWC, Flow), and progressed to leading CRM optimizations and working on the architecture and development of microservices on AWS, using Go and Python.

PROFESSIONAL EXPERIENCE:

Analista Jr Redecard - Desenvolvedor Salesforce

Dez 2024 - Current

As a Junior Software Engineer at Rede, I focus on developing complex solutions on Salesforce and AWS. My responsibilities include technical leadership in optimization initiatives, implementing development best practices, and mentoring new team members. Recently, I led the strategic refactoring of the client onboarding journey, using Apex, LWC, and Flow to rebuild screens and integrate APIs. This initiative significantly reduced formalization time and optimized new client conversion.

Additionally, I developed a tactical management dashboard in LWC, which centralizes performance data (visits, appointments) into charts and tables. The tool provided managers with real-time visibility for tracking goals and decision-making.

PROFESSIONAL EXPERIENCE:

Redecard Internship - Salesforce Developer

Jun 2023 - Dez 2024

As a **Salesforce Developer Intern**, I acquired a robust technical foundation in the platform's ecosystem, mastering **Apex**, **Visualforce**, **SOQL**, **Aura**, and **LWC**. During this period, I worked on developing the new **onboarding flow** for individuals and implemented a **log monitoring system** for the onboarding journey, automating data processing, sending it to **AWS**, and building dynamic dashboards for performance analysis. Additionally, I collaborated on creating **Go APIs** for integrating external services with **Salesforce**, gaining practical experience in **agile methodologies**, **CI/CD**, and large-scale system integration.

Internship at Itaú Unibanco - Internship in Credit risk

Dec - 2022 - May 2023

Working in the **Credit Risk** area at **Itaú BBA**, I was responsible for the **modeling**, **monitoring**, and **automation** of risk parameters. I used **Python** to develop automation solutions and for the mitigation of **LGD (Loss Given Default)** in guaranteed operations. My activities also included monitoring **provision pipelines (BRGAAP, IFRS9)** and creating complex reports, dashboards, views, and statistical tests using **SQL**, **VBA**, and **Excel** to support business area decisions.

Internship at Inmetro - Application developer in Shiny R

Apr 2022 - Apr 2023

As a **Web Developer**, I was responsible for the design and implementation of a **full-stack software** for automating statistical and machine learning analyses. Using **RShiny** as the main framework, with **JavaScript**, **HTML/CSS** for the frontend, I created an interactive platform where users can import data (**Excel**), generate complex visualizations (**2D/3D charts**), and customize reports. The back-end, developed in **R** and **Python**, automated data transformation and the execution of hypothesis tests (such as **ANOVA**, **T-Test**, and **MANOVA**). Additionally, I developed **Web Scraping** scripts (**Selenium**) to collect data from social networks for data analysis about Inmetro.

HOBBIES:

I really like playing video games both on the computer and on my cell phone, also like watching anime, series, films and reading manga. I also love watching YouTube on the most diverse subjects, from scientific videos, music to games.

I also really enjoy spending time studying different topics that I find very interesting, such as Physics, Music, Art, Design and many other topics, which end up not being useful professionally but I still believe to be very important.

LANGUAGES:

- Native Portuguese
- Fluent English
